

Internship Task: Hotel Booking Form

Task Name:

Hotel Booking Form

Duration:

10 Days

Task Description:

The task is to design and develop a hotel booking form that includes fields for check-in/check-out dates, room type, guest count, and special requests. The form should include proper validation for date selection and ensure that the check-out date is later than the check-in date. This task will help students practice form validation, responsive design, and dynamic form behavior.

Objectives:

- Create a functional hotel booking form with multiple fields.
 - Implement date validation to ensure the check-out date is after the check-in date.
 - Use proper form validation for required fields.
 - Ensure the form is responsive and works across various screen sizes.
 - Use GitHub for version control to track progress.
-

Features to Implement:

1. Form Fields:

- Check-in Date: A date input field to select the check-in date.
- Check-out Date: A date input field for selecting the check-out date. Ensure the check-out date cannot be before the check-in date.
- Room Type: Dropdown or select field with options such as Single, Double, Suite, etc.
- Guest Count: Number input for the number of guests (adults and children).
- Special Requests: A textarea for any special requests or notes (optional).
- Submit Button: A button to submit the form after validation.

- 2. Date Validation:**
 - Validate that the check-out date is after the check-in date.
 - Optionally, restrict dates (e.g., no bookings for past dates, certain date ranges, etc.).
 - 3. Responsive Design:**
 - Ensure the form is responsive and works well on mobile, tablet, and desktop devices.
 - Use Flexbox or CSS Grid to layout the form fields in an accessible and attractive manner.
 - 4. Optional Enhancements:**
 - Display dynamic messages or error alerts if validation fails.
 - Add tooltips or information icons to guide users on how to fill out certain fields (e.g., room types or special requests).
 - Use JavaScript to dynamically update available dates or options (e.g., limiting check-out dates based on the check-in date).
-

Technology Stack:

- HTML5
 - CSS3 (using frameworks like Bootstrap or Tailwind CSS for responsiveness)
 - JavaScript (for form validation and interactivity)
 - Optional Enhancements:
 - Use libraries like jQuery UI for date pickers or custom date validation logic.
-

Interactive Components:

- Date pickers for check-in/check-out dates.
 - Form validation with error handling and dynamic feedback messages.
 - Conditional field behavior, e.g., adjusting available options based on previous selections.
-

Version Control:

- Students must create a repository on GitHub.
- Commit changes regularly (with meaningful commit messages).
- Push the final project code to the GitHub repository.

Presentation:

- Deploy the project using platforms like GitHub Pages, Netlify, or Vercel.
 - Prepare a brief presentation/demo (5-10 minutes) explaining:
 - Features of the hotel booking form.
 - How validation works and how the form interacts with the user.
 - Technologies used and challenges faced during development.
-

Deliverables:

1. A fully functional hotel booking form with all required fields and validations.
 2. Source code pushed to the GitHub repository.
 3. Link to the deployed webpage.
 4. Documentation (README file) containing:
 - Project Overview.
 - Instructions to run the project.
 - Technologies used.
-

Task Evaluation Criteria:

1. Design Quality: UI/UX, responsiveness, and overall appearance. (25%)
 2. Functionality: Date validation, form submission, and interactivity. (25%)
 3. Code Quality: Clean, readable, and well-structured code. (20%)
 4. GitHub Usage: Proper commits and repository structure. (15%)
 5. Presentation/Demo: Clear explanation of work and project deployment. (15%)
-

Tools and Resources:

- Code Editors: VS Code, Sublime Text, etc.
- Version Control: Git and GitHub
- CSS Frameworks: Bootstrap or Tailwind CSS
- JavaScript Libraries (Optional): jQuery UI for date pickers, etc.

- Deployment Platforms: GitHub Pages, Netlify, Vercel
-

Deadline:

The task must be submitted within 10 days from the date of assignment.
